

June 4, 2020

Dear Professor See,

We would like to thank both reviewers for their thoughtful and helpful comments. We are delighted that they found our submission a “well-written paper that makes a useful contribution to the accessibility literature regarding quantifying accessibility” as well as “a nice added-value to the extensive literature on the subject.”

We feel we have addressed each comment raised by the reviewers, both major and minor. In particular, we re-executed our analysis using network distances in place of the Euclidean distances used in the original manuscript; the findings of this analysis were inconsequential, and our decision to retain the Euclidean specification is detailed in the attached response to reviewers.

We are grateful for the opportunity to submit this revised manuscript for further review and consideration in *Environment and Planning B: Urban Analytics and City Science*.

Regards,
